

Frequently Asked Questions

Version 2.0 · September 2026 · cyclex.network

TOKEN CycleX (CYCX)	NETWORK / STANDARD BNB Smart Chain · BEP-20
TOTAL SUPPLY 99,000,000,000 · fixed, no mint	CIRCULATING TOKENS 100,000,000 · public & liquidity
REWARD CYCLE Quarterly · 9% target	CLAIM METHOD Self-claim · Merkle proof
CONTRACT 0xda63b65825AE30532a507B0C091B0bD9F8204F7E	

01 · PLATFORM

CycleX Network and its tools

What is CycleX Network?

A Web3 security ecosystem that shows what a token, a contract or a wallet permission can really do, before you sign, buy or connect. It includes the Security Hub, the CycleX Network Scanner Bot on Telegram, the Firewall and the Developer API.

What does a token scan check?

Quick Scan checks contract controls (owner, mint, pause, blacklist, proxy), liquidity and LP lock or burn evidence, holder concentration and market structure. **Deep Intelligence** adds a real buy and sell simulation through the token's DEX router to detect honeypots and measure buy, sell and transfer tax, plus deployer history, early-buyer activity, shared-funding wallets, LP lock expiry and ownership history.

What does "unknown" mean in a report?

It means the data could not be verified, for example because a provider did not respond or history was incomplete. CycleX Network never shows missing data as zero, "none" or "safe". Figures read directly from the blockchain are marked as verified on-chain.

Do I need to connect my wallet to scan a token?

No. Token scans read public blockchain data only. No wallet connection, signature or seed phrase is ever needed to scan.

Which networks are supported?

12 networks, including BNB Smart Chain, Ethereum, Base, Arbitrum, Polygon, Optimism, Avalanche and Solana.

What is the Developer API?

Programmatic access to CycleX Network monitoring: asset events, incidents, watchlists and webhooks. The base URL is <https://cycllex.network/api> and every plan, including Free (10,000 calls per month), uses an API key. Paid plans offer higher monthly quotas and longer history.

02 · THE TOKEN

CYCX and the contract

Has CYCX launched?

Not yet. The launch date and the reward-cycle schedule will be announced only through the official CycleX Network channels. Anyone offering CYCX before an official announcement is not affiliated with the project.

What is the contract address?

0xda63b65825AE30532a507B0C091B0bD9F8204F7E on BNB Smart Chain (BEP-20). Always verify the address on cycllex.network before interacting.

Can new tokens be minted?

No. The total supply of 99,000,000,000 CYCX was created once at deployment. The contract has no mint function, so the supply can only decrease through burns.

Who holds the supply?

100,000,000 CYCX are the only tokens that will circulate, allocated to public distribution and liquidity. The remaining 98,900,000,000 CYCX are held by the token contract itself as the treasury. There is no team allocation, no investor allocation and no vesting.

Does the contract have taxes or a blacklist?

No. There is no buy, sell or transfer tax, and no blacklist or per-wallet blocking.

Can anyone move tokens out of my wallet?

No. Tokens in your wallet are under your control only. No one, including the contract owner, can move them.

Can the contract be paused?

Yes. The contract owner can pause all token transfers, including trading and claims, as an emergency control. We state this openly because any security scanner, including our own, will report it.

Is the contract upgradeable?

No. The contract has no proxy and its code cannot be replaced. It is built on OpenZeppelin v5.

Reward cycles and eligibility

How much are the rewards?

The target is 9% per cycle, distributed to eligible holders. It is a target set by the published policy, not a guaranteed return.

When do cycles happen?

After launch, cycles run at the end of March, June, September and December.

Who is eligible?

Wallets that have held CYCX for at least 60 consecutive days in a self-custody Web3 wallet.

Do exchange balances qualify?

No. Tokens held on an exchange are in addresses you do not control, so they cannot qualify.

Does moving or selling part of my tokens affect eligibility?

Yes. Holdings are tracked in lots, and when tokens leave your wallet the **oldest lots leave first**. Selling or transferring part of a position therefore removes your most mature holding time first.

How do I claim?

Connect your self-custody wallet on the official website, check your eligibility and submit a `claim()` transaction. The contract verifies your Merkle proof. You pay your own gas, and each wallet can claim once per cycle.

What happens to unclaimed rewards?

They do not roll over to the holder. Each cycle must be claimed within that cycle. Unclaimed amounts stay in the contract treasury.

Where does the 20% for Development & Operations come from?

From the contract treasury only. For every 1 CYCX that holders receive, the treasury also burns 1 CYCX and sends an additional 0.2 CYCX to Development & Operations. Holders still receive the full 1 CYCX. Nothing is deducted from them.

How are reward amounts decided and verified?

Eligibility and amounts are computed off-chain by the published policy and committed on-chain as a Merkle root with the cycle total. The contract then enforces that the treasury can cover the cycle, that claims never exceed the committed total and that each wallet claims only once. Every cycle start is recorded on-chain, and CycleX Network publishes the number of eligible wallets and the snapshot block for each cycle.

What happens when the treasury runs low?

Each cycle uses 2.2 CYCX from the treasury for every 1 CYCX paid to holders, so the treasury is finite. When it approaches depletion, CycleX Network will introduce a successor token with a simple, fast migration path, designed so that no holder loses their position. The terms will be published in advance.

What if the website goes down?

The contract, its rules and all balances stay on-chain. A website outage can make access less convenient, but it does not change anything in the contract.

04 · SAFETY

Official channels and anti-scam rules

How do I recognize official communication?

Only announcements published in the verified CycleX Network channels and on cyclex.network are official.

Admins will never message you first.

Security checklist

- Never share a seed phrase or private key with anyone, for any reason
 - Ignore private messages offering manual claims, airdrops, recovery or urgent support
 - Before launch, no one can sell you CYCX
 - Verify the domain and the contract address before connecting a wallet
 - Use a hardware wallet for long-term holdings
 - If anything is unclear, do not connect and do not sign.
-

05 · RISK

Risk and disclaimer

Is this financial advice?

No. CycleX Network is a utility-based Web3 ecosystem. This FAQ is informational only and is not financial, investment, legal or tax advice. Rewards depend on eligibility, protocol rules, contract execution and treasury balance, and are not guaranteed.

What are the main risks?

Market risk (price volatility) · **smart-contract risk** (errors or unexpected behavior) · **administrative risk** (the owner's emergency pause and control of cycle starts) · **treasury risk** (a finite treasury) · **network and operational risk** (congestion, RPC or website outages) · **regulatory risk** (changing laws). Security scans reduce risk but cannot eliminate it. A clean result is not a guarantee of safety.
